

A scatter plot illustrating the relationship between the number of species ( $S$ ) and the number of individuals ( $N$ ). The x-axis represents the 'Number of individuals' (ranging from 0 to 100), and the y-axis represents the 'Number of species' (ranging from 0 to 10). A diagonal line is drawn from the origin (0,0) to the top right corner (100,10), representing the 1:1 relationship. Data points are plotted as circles of varying sizes, indicating the magnitude of the relationship. The points generally follow the diagonal line, suggesting a positive correlation between the number of individuals and the number of species.
